

Exam4Test 310-051 Exams**SUN SUN CERTIFIED ENITRPRISE ARCHITECT FOR J2EE(tm) TECHNOLOGY****Practice Exam:** 310-051**Exam Number/Code:** 310-051**Exam Name:** SUN CERTIFIED ENITRPRISE ARCHITECT FOR J2EE(tm)
TECHNOLOGY**Questions and Answers:** 96 Q&As**Order :** [310-051 Exam](#)**Exam Description**

1. Exam4Test offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the 310-051 Exam.

Exam4Test **Practice Exams** for 310-051 are written to the highest standards of technical accuracy, provided by our certified subject matter experts and published authors for development.

3. 100% Guarantee to Pass Your **SUN Other Certifications** exam and get your *SUN Other Certifications Certification*.

We guarantee your success in the first attempt. If you do not pass the **SUN Other Certifications** "310-051" (SUN CERTIFIED ENITRPRISE ARCHITECT FOR J2EE(tm)TECHNOLOGY on your first attempt, send us the official result. We will give you a FULLY REFUND of your purchasing fee and send you another same value product for free.

4. Exam4Test SUN Other Certifications 310-051 Exam Downloadable.

Our PDF or Testing Engine Preparation Material of SUN Other Certifications 310-051 exam provides everything which you need to pass your exam. The SUN Other Certifications Certification details are researched and produced by our Professional Certification Experts who are constantly using industry experience to produce precise, and logical. You may get "310-051 exam" questions from different websites or books, but logic is the key. Our Product will help you not only pass in the first SUN CERTIFIED ENITRPRISE ARCHITECT FOR J2EE(tm)TECHNOLOGY(SUN Other Certifications) exam try, but also save your valuable time.

Comprehensive questions with complete details about 310-051 exam.

310-051 exam questions accompanied by exhibits. Verified Answers Researched by Industry Experts and almost 100% correct.

Drag and Drop questions as experienced in the Real SUN Other Certifications exam. 310-051 exam questions updated on regular basis.

Like actual SUN Other Certifications Certification exams, 310-051 exam preparation is in multiple-choice questions (MCQs). Tested by many real SUN Other Certifications exams before publishing.

Try free SUN Other Certifications exam demo before you decide to buy it in <http://www.Exam4Test.com>

High quality and Valued for the 310-051 Exam: 100% Guarantee to Pass Your 310-051 exam and get your SUN Other Certifications Certification. Come to <http://www.Exam4Test.com> The easiest and quickest way to get your SUN Other

Certifications Certification.

Exam4Test professional provides SUN Other Certifications 310-051 the newest Q&A, completely covers 310-051 test original topic. With our completed SUN Other Certifications resources, you will minimize your SUN Other Certifications cost and be ready to pass your 310-051 test on Your First Try, 100% Money Back Guarantee included!

310-051 Exam Study Guide

310-051 exam is regarded as one of the most favourite [SUN Other Certifications Certifications](#). Many IT professionals prefer to add 310-051 exam among their credentials. Exam4Test not only caters you all the information regarding the 310-051 exam but also provides you the excellent 310-051 study guide which makes the certification exam easy for you.

Exam4Test Engine Features

Comprehensive questions and answers about 310-051 exam

310-051 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

310-051 exam questions updated on regular basis

Same type as the certification exams, 310-051 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free 310-051 exam demo before you decide to buy it in Exam4Test.com

Exam4Test Help You Pass Any IT Exam

[Exam4Test.com](#) offers incredible career enhancing opportunities. We are a team of IT professionals that focus on providing our customers with the most up to date material for any IT certification exam. This material is so effective that we Guarantee you will pass the exam or your money back.

Exam : Sun 310-051

Title : Sun Certified Enterprise Architect for J2EE(TM)Technology

1. Your client is a bank that wants to allow its customers to access their bank accounts over the Internet. Given the following requirements, which protocol communicates with the Web browsers?

Confidential information must be protected.

Customers will access their account using only a simple Web browser with no extensions.

- A. IIOP
- B. HTTP
- C. SNMP
- D. HTTPS

Answer: D

2. Which statement about passivating session beans is true?

- A. The passivated stateless session bean should close all connections before being passivated.
- B. The container ensures that the passivated bean's open connections are closed or returned to the connection pool.
- C. The container ensures that the passivated stateless session bean is reassigned to the remote object upon activation.
- D. The passivated stateful session bean should open the connections in activation that were closed when it was passivated.

Answer: D

3. Which two statements about the lifecycle of a session bean are true? (Choose two.)

- A. The data in a stateful session bean survives a server's crash.
- B. A server that has crashed and been restarted can deserialize cached data for a stateful session bean.
- C. A session bean instance can be recreated through the use of a handle.
- D. Client should be prepared to recreate a session bean in the event of a server crash.

Answer: CD

4. Which design pattern is represented by the JDBC ResultSet class?

- A. Bridge
- B. Iterator
- C. Composite
- D. Factory Method

Answer: B

5. Which pattern is the most appropriate for allowing transparent access to a remote object?

- A. Proxy
- B. Facade
- C. Memento
- D. Singleton
- E. Command

Answer: A

6. Which two features of a firewall might interfere with the operation of IIOP? (Choose two.)

- A. port filtering
- B. load balancing
- C. address filtering
- D. network address translation

Answer: AC

7. You have been tasked to create an architecture which has EJB making calls on legacy services. The legacy services all run on UNIX machines and provide Java network APIs. Each invocation on the EJB must be in a transaction.

How can the EJB transaction adhere to the ACID properties when making a legacy service call?

- A. let the EJB container manage the transaction
- B. make sure the EJB is an entity bean and have the state automatically managed
- C. have the EJB monitor the service call completion and roll back the EJB state if necessary
- D. mark the EJB as Container Managed Transaction and have the bean demarcate the transaction

Answer: C

8. Which statement is true about pooling entity beans?

- A. Pooling entity beans can increase reliability.
- B. Pooling entity beans can increase scalability.
- C. Pooling entity beans can increase extensibility.
- D. Pooling entity beans has no effect on scalability or reliability.

Answer: B

9. What are two features of IIOP? (Choose two.)

- A. It is secure.
- B. It is connectionless.
- C. It is connection-based.
- D. It is used for load balancing.
- E. It is used for hypermedia requests.
- F. It is used for remote-object communications.

Answer: CF

10. Which three are limitations of design patterns? (Choose three.)

- A. They can complicate a design.
- B. They are limited to Java and C++.
- C. They can introduce performance problems.
- D. They do not provide an implementation for a specific problem.

Answer: ACD

11. You are developing an HR application with the following requirements:

Users access the systems over an intranet, using a standard Web browser.

Organization information is stored in LDAP.

Benefits information is stored in an RDBMS.

Complaints are sent directly to a third-party system for compliance.

Which J2EE technology would send messages to the third-party complaint system?

- A. EJB
- B. JSP
- C. JMS
- D. JTA
- E. JNDI
- F. JDBC

Answer: C

12. A telemarketing company is building an enterprise system to allow the sales staff to access contact information over an intranet. All of the contact information is stored in a legacy system and can only be accessed using a VT100 terminal session. You must create an architecture to access that legacy system.

Which component should you use to encapsulate access to the legacy system?

- A. a Java class that uses a screen-scraping tool to interact with the legacy system
- B. a distributed CORBA object that uses IIOP to interact directly with the legacy system
- C. an EJB session bean that uses JMS to send asynchronous messages to the legacy system
- D. an EJB entity bean that uses container-managed persistence to encapsulate the legacy system

Answer: A

13. Which two services does EJB provide? (Choose two.)

- A. HTML generation
- B. transaction services
- C. lifecycle management
- D. remote-method invocation

Answer: BC

14. Which pattern allows dependent objects to be notified when an object changes state?

- A. Mediator
- B. Observer
- C. Decorator
- D. Interpreter
- E. Command

Answer: B

15. Which statement about an EJB container's lifecycle management of session beans is true?

- A. The container can activate a session bean to free limited resources.
- B. The container can passivate a stateless session bean to free limited resources.
- C. A developer can specify a timeout in the deployment tool that causes a container to remove the bean after the timeout period.
- D. A developer can specify a timeout in the deployment tool that causes a container to remove a bean whose transaction has not been committed within the timeout period.

Answer: C

16. A toy company is building an enterprise system to allow the sales staff to place customer orders over an intranet. All orders must be placed using a legacy system running MQSeries. You must create an architecture to interact with that legacy system.

How would you encapsulate interaction with that legacy system?

- A. with an EJB session bean that uses a screen scraping tool
- B. with a distributed CORBA object that uses IIOP to message the legacy system
- C. with a Java class that uses JMS to send asynchronous messages to the legacy system
- D. with an EJB entity bean that uses container-managed persistence to encapsulate the legacy system

Answer: C

17. These are the requirements for your new system:

All current business logic is in the form of database-stored procedures.

All current and new business logic is to be migrated to EJB.

The system is an online, Web-based system. The UI is HTML-based.

There are three EJBs: Customer, Order, and Account. There is one Java object, ShoppingList, which holds the current list of ordered items.

Only account and order data are stored in the database.

The Customer EJB maintains a reference to the ShoppingList.

Which three architectural decisions adhere to the requirements? (Choose three.)

- A. make Order and Account an entity EJB
- B. make Customer a stateful-session EJB
- C. make Customer a stateless-session EJB
- D. make Customer an entity EJB and put business logic in it
- E. make Customer a session EJB and put business logic in it
- F. use the Container Managed Persistence policy for the Customer session EJB

Answer: ABE

18. What are two benefits of the Iterator pattern? (Choose two.)

- A. It organizes collections into tree structures.
- B. It performs a task for each object it visits in the collection.
- C. It supports traversing the same collection in different orders.
- D. Multiple iterators can traverse the same collection simultaneously.

Answer: CD

19. Click the Exhibit button.

then click the Tile button. You have been hired to design a service-based architecture for your customer. The requirement is to integrate the existing services and provide web access.

The customer design team has drawn up a suggested architecture as shown in the Exhibit. Their suggested architecture shows the Web server making requests to the relevant service and having service-to-service communication handle the business request.

Which two statements are false about the suggested architecture? (Choose two.)

- A. The suggested architecture may require new service-to-service communication to support new business functionality.
- B. The suggested architecture puts the burden on the service-to-service communication to support new business functionality.
- C. The suggested architecture will not require new service-to-service communication to support new business functionality.
- D. Introducing EJB into the suggested architecture would require having the services communicating with the EJB as if it was another service.

Answer: CD

20. You have been tasked with Web-enabling your backend order-entry services using J2EE technology. Your

services are mainframe-based, and all have C APIs. All client access must be through the Web server, and all new business logic will be in EJB. Which two architectural solutions are appropriate for your new order-entry system?

(Choose two.)

- A. wrap J2EE technology around the existing services
- B. wrap the existing services around J2EE technology
- C. have JSP use Java objects to make EJB business calls
- D. put the business logic in Java objects called by JSP, and have the JSP make EJB business calls

Answer: AC
