

Exam4Test E20-475 Exams

EMC Content Management Systems Architecture

Practice Exam: E20-475

Exam Number/Code: E20-475

Exam Name: Content Management Systems Architecture

Questions and Answers: 231 Q&As

Exam Description

Order : [E20-475 Exam](#)

1. Exam4Test offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the E20-475 Exam.

Exam4Test **Practice Exams** for E20-475 are written to the highest standards of technical accuracy, provided by our certified subject matter experts and published authors for development.

3. 100% Guarantee to Pass Your **EMC Certification** exam and get your **EMC Certification Certification**.

We guarantee your success in the first attempt. If you do not pass the **EMC Certification** "E20-475" (Content Management Systems Architecture on your first attempt, send us the official result. We will give you a FULLY REFUND of your purchasing fee and send you another same value product for free.

4. Exam4Test EMC Certification E20-475 Exam Downloadable.

Our PDF or Testing Engine Preparation Material of EMC Certification E20-475 exam provides everything which you need to pass your exam. The EMC Certification Certification details are researched and produced by our Professional Certification Experts who are constantly using industry experience to produce precise, and logical. You may get "E20-475 exam" questions from different websites or books, but logic is the key. Our Product will help you not only pass in the first Content Management Systems Architecture(EMC Certification) exam try, but also save your valuable time.

Comprehensive questions with complete details about E20-475 exam.

E20-475 exam questions accompanied by exhibits. Verified Answers Researched by Industry Experts and almost 100% correct.

Drag and Drop questions as experienced in the Real EMC Certification exam. E20-475 exam questions updated on regular basis.

Like actual EMC Certification Certification exams, E20-475 exam preparation is in multiple-choice questions (MCQs). Tested by many real EMC Certification exams before publishing.

Try free EMC Certification exam demo before you decide to buy it in <http://www.Exam4Test.com>

High quality and Valued for the E20-475 Exam: 100% Guarantee to Pass Your E20-475 exam and get your EMC Certification Certification. Come to <http://www.Exam4Test.com> The easiest and quickest way to get your EMC Certification Certification.

original topic. With our completed EMC Certification resources, you will minimize your EMC Certification cost and be ready to pass your E20-475 test on Your First Try, 100% Money Back Guarantee included!

E20-475 Exam Study Guide

E20-475 exam is regarded as one of the most favourite [EMC Certification Certifications](#). Many IT professionals prefer to add E20-475 exam among their credentials. Exam4Test not only caters you all the information regarding the E20-475 exam but also provides you the excellent E20-475 study guide which makes the certification exam easy for you.

Exam4Test Engine Features

Comprehensive questions and answers about E20-475 exam

E20-475 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

E20-475 exam questions updated on regular basis

Same type as the certification exams, E20-475 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free E20-475 exam demo before you decide to buy it in Exam4Test.com

Exam4Test Help You Pass Any IT Exam

[Exam4Test.com](#) offers incredible career enhancing opportunities. We are a team of IT professionals that focus on providing our customers with the most up to date material for any IT certification exam. This material is so effective that we Guarantee you will pass the exam or your money back.

Exam : EMC E20-475

Title : Content Management Systems Architecture Exam

1. After an upgrade from a pre 5.3 version to 5.3 or 6, what can you do to remove the Verity Full-text Index components?
 - A. You delete the Verity Full-text Index components via Documentum Administrator after the upgrade.
 - B. The Content Server upgrade procedure deletes the Full-text. Just the empty/fulltext/Verity directory needs to be deleted in the DOCUMENTUM directory.
 - C. You do not delete the Verity Full-text Index. The new Fast Full-text installation needs the data for migration.
 - D. You delete the Documentum type dmi_tdk_index and the Full-text data in DOCUMENTUM/data directory.Answer: B
2. What is the supported procedure for rolling back an upgrade of Documentum Content Server?
 - A. uninstall the current version, then reinstall the previous version
 - B. run the uninstaller for the current version and run the Data Dictionary Publish job
 - C. remove the directory under %DOCUMENTUM%/product for the current version, change server.ini file and dm_server_config, dm_docbase_config objects
 - D. restore the system from backupAnswer: D
3. Before upgrading the Content Server software, which job do you need to run to find sysobjects that point to non-existent content?
 - A. Content Warning
 - B. Consistency Checker
 - C. Dmclean

D. State of the Repository Report

Answer: B

4. Which file replaces the pre-D6 dmcl.ini?

- A. dfc.properties
- B. docbroker.ini
- C. java.ini
- D. dbor.properties

Answer: A

5. Which statement is true about the dump and load operation?

- A. Aspects associated with a dumped object are not included in the dump file.
- B. Content stored in external file storage may be included in a dump file, but blob or turbo storage may not.
- C. The source and target repositories must be the same version, but may use different code pages.
- D. Objects in the target repository will always have the same r_object_id as the corresponding object in the source repository.

Answer: A

6. You are tasked with performing a Content Server upgrade.

To accomplish this, you do the following:

You first make a repository copy of the production repository by installing the Content Server.

You then create a new repository.

You then copy the database and file storage areas from production to the new environment.

To be successful, what must be true of the new repository copy after this operation is complete?

- A. It must have the same Docbase ID as the production repository.
- B. It must have a different owner than the production repository.
- C. It must project to the same Connection Broker as the production repository.
- D. It must have the same Database Connection string as the production repository.

Answer: A

7. A client has a Content Server, Site Caching Services (SCS), Content Transformation Services (CTS), and Full-text Indexes installed on Windows/Oracle servers. The client wants to migrate Documentum applications to Linux.

Which statement is true?

- A. The client must migrate Oracle servers to Linux.
- B. SCS is not supported on Linux.
- C. CTS is not supported on Linux.
- D. Content Server is not supported on Linux/Oracle.

Answer: C

8. What is required for using Business Object Framework 2 (BOF 2)?

- A. a dfc.properties file on all client machines such as application servers
- B. a DBOR.properties and a dfc.properties file on all client machines such as application servers and a global registry repository
- C. a DBOR.properties file on all client machines and a global registry repository
- D. a global registry repository and a dfc.properties file on all client machines

Answer: D

9. In addition to core software upgrade considerations, which component of a Documentum system are most likely to require additional work?

- A. software use cases
- B. network topology
- C. data center architecture
- D. application customizations

Answer: D

10. Which Application Server does D6 Content Server install for its internal use?

- A. BEA Weblogic
- B. Oracle AS
- C. Apache Tomcat
- D. IBM WebSphere

Answer: A

11. Which is a supported path for upgrading a Content Server to D6?

- A. 4i > 5.2.5 > 6
- B. 5.2 > 5.2.5 > 6
- C. 4i > 5.3 > 6
- D. 5.2.5 > 5.3 > 6

Answer: D

12. You are planning the upgrade of your Content Server software with Branch Office Caching Service (BOCS) on a remote site. The repository has approximately one million objects with 400 GB of content and 350 GB of full-text indexes. The BOCS cache has 20 GB of content.

What must be backed up before starting with the upgrade?

- A. content, full-text index, and database
- B. content, full-text index, and BOCS cache
- C. full-text index, database, and BOCS cache
- D. content, database, and BOCS cache

Answer: A

13. A client wants to upgrade a repository from 5.2.5 to 5.3. The repository has 8 million content objects with an average size of 50K. The full text searching capability is required to be available within 24 hours of the repository upgrade. The Full-text Index Server is installed on a separate server. The upgrade is scheduled to happen in two months.

How can the client accomplish this objective?

- A. configure an Index Agent in normal mode to operate against the 5.2.5 repository
create the Full-text Indexes

run the ftintegrity tool to identify documents that were not indexed, and resubmit those documents for indexing
upgrade the Content Server and the repository

- B. upgrade the Content Server and the repository
configure an Index Agent in normal mode to operate against the upgraded repository
create the Full-text Indexes

- C. configure a 5.3 Index Agent in migration mode to operate against the 5.2.5 repository
create the Full-text Indexes.

run the ftintegrity tool to identify documents that were not indexed, and resubmit those documents for indexing
upgrade the Content Server and the repository

shut down the migration-mode Index Agent and change it to a normal-mode Index Agent.

- D. upgrade the Content Server and the repository
configure an Index Agent in migration mode to operate against the upgraded repository
create the Full-text Indexes.

shut down the migration-mode Index Agent and change it to a normal-mode Index Agent

Answer: C

14. A client is migrating their repositories from Windows to Linux. The database server is Oracle. The content file stores are on NAS and made available over CIFS. For the migration, the client has done the following:

installed Content Server and Oracle client on Linux using an installation owner account with the same name on Windows

copied the tnsnames.ora from Windows to Linux

configured replacement Connection Brokers

added Services entries for the repositories on the Linux Content Server environment

attached to the NAS storage using NFS

updated for each repository the web_server_loc, smtp_server, r_host_name, r_install_domain, and projection target attributes for server config using SQL to reflect the new server name

Which minimal high-level steps does the client need to take to complete the migration?

A. copy all the configuration, and the aek.key files under %DOCUMENTUM%dba Windows to \$DOCUMENTUM/dba on the Linux Content Server

update the user_auth_target, database_password_file, and Docbase Projection Target fields in each server.ini

update the appropriate dm_location objects in the repositories using SQL to map to the new locations

B. copy all the configuration files under %DOCUMENTUM%dba Windows to \$DOCUMENTUM/dba on the Linux Content Server

update the user_auth_target, database_password_file, and Docbase Projection Target fields in each server.ini

update the appropriate dm_location objects in the repositories using SQL to map to the new locations

C. copy all the configuration, and the aek.key files under %DOCUMENTUM%dba Windows to \$DOCUMENTUM/dba on the Linux Content Server

update the Docbase Projection Target fields in each server.ini

update the appropriate dm_location objects in the repositories using SQL to map to the new locations

D. copy all the configuration files under %DOCUMENTUM%dba Windows to \$DOCUMENTUM/dba on the Linux Content Server

update the database_password_file, and Docbase Projection Target fields in each server.ini

update the appropriate dm_location objects in the repositories using SQL to map to the new locations

Answer: A

15. Your client's Content Servers are running on Sun/Oracle. These servers have numerous custom applications installed and have been upgraded several times. Security and regulatory considerations preclude the copying of certain production data to non-production systems. The client's configuration/change management processes and systems are incomplete or missing. You are tasked with drafting a plan to copy a repository from the production environment to a development environment in preparation for an upgrade.

Which process should you use to ensure that the new development environment is as similar to the production environment as possible?

A. install Content Server in the development environment using the same docbase id as the production environment
use the Oracle Import/Export tools to export the production database and import it into the development environment
modify various configuration data to conform to the development environment

copy a subset of the production content to the development storage

B. install Content Server in the development environment using the same docbase id as the production environment
use the Dump and Load utility to transfer data and metadata from the production environment to the development environment
modify various configuration data to conform to the development environment

use DQL/DFC applications to delete potentially sensitive data from the development environment

C. copy the entire \$DOCUMENTUM directory and all subdirectories from the production to the development environment

use the Dump and Load utility to transfer data and metadata from the production environment to the development environment

modify various configuration data to conform to the development environment

D. copy the entire \$DOCUMENTUM directory and all subdirectories from the production to the development environment

use the Oracle Import/Export tools to export the production database and import it into the development environment
modify various configuration data to conform to the development environment

create a dm_location object and filestore in the production system pointing to the development storage

use the Migrate Content method with an appropriate DQL qualifier to copy a non-restricted subset of the production content to the development filestores

remove the new dm_location and dm_filestore objects

Answer: D

16. Which file(s) handle client configuration in D6?

- A. dmcl.ini only
- B. dfc.properties only
- C. dmcl.ini and dfc.properties
- D. dmclfull.ini only

Answer: B

17. What is the correct sequence of steps for upgrading Content Server and Full-text Index Server?

- A. uninstall Full-text Index Server delete Index Agents upgrade Content Server install Index Agents install Full-text Index Server
- B. upgrade Content Server uninstall Full-text Index Server delete Index Agents install Index Agents install Full-text Index Server
- C. delete Index Agents uninstall Full-text Index Server upgrade Content Server install Full-text Index Server install Index Agents
- D. delete Index Agents upgrade Full-text Index Server upgrade Content Server install Index Agents

Answer: C

18. A client wants to upgrade their Documentum system from 5.3 SP3 to D6, but does not have the resources to upgrade and test web applications such as Webtop and Content Server components within a single downtime window. The client asks whether the upgrade can be phased, and if so which components should be upgraded first. What is the correct response to the customer's question?

- A. Web applications must be upgraded before the Content Server.
- B. Web applications must be upgraded after the Content Server is upgraded.
- C. Web applications may be upgraded before or after the Content Server is upgraded.
- D. Web applications do not need to be upgraded to make use of D6 features.

Answer: C

19. What is the proper sequence of steps for upgrading Content Server and Document Transformation Services (DTS)

- A. uninstall Content Server
uninstall DTS
install Content Server
install DTS
add DTS Support to repository
- B. remove DTS Support from repository
uninstall DTS upgrade Content Server
install DTS
add DTS Support to repository
- C. upgrade Content Server
remove DTS Support from repository
uninstall DTS
install DTS
add DTS support to repository
- D. remove DTS Support from repository
upgrade Content Server
uninstall DTS
install DTS
add DTS support to repository

Answer: B

20. What is the recommended method for migrating Web Content Management (WCM) Page Builder templates, blueprints, managed links, and associated content from a production environment to a testing environment?

- A. archive and install a DocApp
- B. perform a repository-to-repository copy operation through WebPublisher

- C. execute cabinet dump and load
 - D. use a deep export/import through WebPublisher
- Answer: A
