- A. preemptive
- B. self-defined
- C. system-defined
- D. never preemptive

Answer: D

4. What can user libraries be used for? Select TWO.

- A. to provide source code for compilation

- B. to share common compiled procedures
- C. to override an operating system procedure
- D. to provide an alternate main procedure/program
- E. to switch from native to non-native mode

Answer: BC

5. A specification proposes implementing a new server class as an OSS process. Which statements are true regarding OSS server classes? Select THREE.

- A. The program must use named-pipes instead of \$RECEIVE.
- B. The processes are limited to a configuration of MAXLINKS = 1.
- C. The program can use DEFINES for configuring file names.
- D. Runtime values in the processes cannot be initialized using PARAM attributes.
- E. The program can access Enscribe and SQL/MP data in addition to SQL/MX data.

Answer: CDE

6. During process startup, how is DEFINE information passed to the process?

- A. The child process programmatically receives the DEFINE information using the function getenv().
- B. The child process receives DEFINE system messages from the parent process as part of the startup sequence.
- C. DEFINE information can be retrieved by the child process by using the DEFINEINFO procedure call.
- D. By default the parent process propagates the DEFINE information in its current context to the child process using the Process File Segment.

Answer: D

7. What happens when a persistent process unexpectedly stops?

- A. The operator manually restarts it.
- B. A continuously checkpointed backup process takes over.
- C. A monitor process immediately restarts it.
- D. A backup process pre-initialized by a single post-initialization checkpoint takes over.

Answer: C

8. The purpose of the CTOEDIT utility is to _____ .

- A. convert unstructured files to structured files
- B. convert C application code written on the PC to a Guardian edit file
- C. convert OSS text files to Guardian text files
- D. generate OSS code to be used in Guardian

Answer: C

9. Why is an application log file most likely to be used outside of the current transaction?

- A. to avoid impact on the transaction response time
- B. to retain records after a transaction backout
- C. because file system locks are meaningless on a sequentially written file
- D. because integrity with transaction data is not required

Answer: B

10. What are two advantages specific to a DLL (Dynamic Link Library)? Select TWO.

- A. It contains Position Independent Code (PIC).
- B. It is loaded during cold load.
- C. It is composed of shared code.
- D. It can have private data.
- E. It can be unloaded from a process.

Answer: AE

11. To RESTORE a partitioned SQL table to a different destination, which option is required?

- A. PHYSVOL

- B. REBUILD
- C. MAP NAMES
- D. VOL

Answer: C
