Exam : IBM LOT-803

Title : Using LotusScript in IBM Lotus Domino 8 Applications

1. Neala is using a hidden field on the Request form to store a temporary value for the request status. Since this field will not be stored, Neala has created it as a Computed for display field. Neala is trying to use the code below to set the tempStatus field to "Draft" when a new document is created with the Request form. An error message displays whenever a new Request is created. What could be the problem?

```
Sub Postopen(Source As Notesuidocument)
If Source.IsNewDoc Then
Call Source.FieldSetText( "tempStatus", "Draft" )
End If
End Sub
```

- A. In order for the FieldSetText method to be used, a field must be editable. Hidden fields are not editable.
- B. The Postopen event occurs before the user has input focus, so only back-end methods will work from this event.
- C. In order for the FieldSetText method to be used, a field must be editable. Computed for display fields are not editable.
- D. The Postopen event occurs after the document has opened, but Computed for display fields are not available for manipulation until after the has input focus.

Answer: C

2. The NotesStream class is used to read and write which of the following?

- A. Files
- B. Network sockets
- C. Domino server console commands
- D. Binary data in NotesRich Text fields (like attachments and inline images)

Answer: A

3. The error message "Error loading USE or USELSX module" can be caused by which of the following?

- A. An improperly defined Const value
- B. An ODBC connection that cannot be made
- C. An attempt to use NotesUIWorkspace in a background scheduled agent
- D. A script library that can't be found or needs to be recompiled using "Recompile All LotusScript"

Answer: D

4. Avery has been asked to write a web service in his Domino application. The web service will allow an Oracle application to query the Movie Rental database with a member identification number and receive a list of all movies th member has rented in the last 30 days. What are the language options available to Avery for writing this web service?

- A. LotusScript and Java
- B. LotusScript, but not Java
- C. Jave, but not LotusScript
- D. LotusScript, Java, and @Formula

Answer: A

5. Aitana is working in the company's Inventory database. She wants to create an array called 'Assembly' that will be used to reference 10 instances of the Part class. Aitana can create a single instance of the Part class using code lik this:

```
Dim myPart As New Part
```

But she is having a problem creating the 'Assembly' array. What is wrong with the following line of code:

```
Dim Assembly(9) As New Part
```

- A. The New keyword cannot be used to declare an array of object reference variables.
- B. 'Assembly' is a reserved word in LotusScript, and cannot be used as a variable name.
- C. If an array declared as Assembly(9) is to hold 10 elements, Option Base 0 must be used.
- D. An array cannot be used to hold multiple Class instances.

Answer: A

6. Marvin wants to export a given Notes document to a DXL text file. How would he accomplish this task?

- A. He would use the NotesXMLTransformer class to copy the document directly to a text file
- B. He would use the ExportDXL method of the NotesDocument class to send the document to a NotesStream that writes to a text file
- C. He would create a NotesDXLExporter object, set the input to the Notes document in question, and set the output to a NotesDXLOutput object that writes to a text file
- D. He would create a NotesDXLExporter object, set the input to the Notes document in question, and set the output to a string that indicates the path of the text file he wants to create.

Answer: D

7. The Salary form needs an AuditHistory field. When documents are changed, Sahir's script must record the date/time, editor's name, and values of all changed fields before and after the change. The solution must also be usable in other forms, and must work without modification, event if new fields are added to the forms. How can Sahir do this?

- A. Write Entering event code for each field, recording field values. Write Exiting events to update AudiHistory if the values change.
- B. Write Postopen event code to populate a list with item names and item values as the document is opened. Write Querysave event code to examine current item values, and update AudiHistory for any changed items.
- C. Write onFocus event code to populate a hidden temporary field with the item values. Write onChange event code to update the AuditHistory if the field is changed.
- D. Write onload event code to populate a list with item names and item values as the document is opened. In the form onExit event, write code to examine current item values and update AudiHistory for any items that changed.

Answer: B

8. Given the following piece of code, where "doc" is a NotesDocument:

```
fieldValue = doc.GetItemValue("Title")
```

```
Print "This document's title is" _fieldValue(0)
```

Which of the following is a correct example of using the "Extended class" syntax to replace the example code above?

- A. Print "This document's title is" _doc.Title
- B. Print "This document's title is" _doc.Title(0)
- C. Print "This document's title is" _doc.GetField.Title
- D. Print "This document's title is" _doc.GetField.Title(0)

Answer: B

9. Ichiro needs to write an agent to read a comma-delimited ASCII file of data about parts that his company uses when building computers. The data is from one of the parts suppliers, and includes 10 fields in each record. Ichiro needs to extract the Part Number, Part Description, and Price from each input record and update his company's Inventory database with the current data. How should Ichiro proceed?

- A. Create a user-defined data Type to represent a Part. Write a 'getter' method for each of the 3 fields that need to be accessed from the data Type.
- B. Create a user-defined class to represent the ASCII file. Write a 'getter' method to retrieve each record, and use the NotesStream.SplitText method to extract the fields.
- C. Create a user-defined class to represent the Parts data. Use notesDOMTextNode.SplitText(",") to parse each field into the appropriate member variable.
- D. Create a user-defined data Type to represent the structure of the Parts data. Each field of a given input record can be referenced using the appropriate member variable.

Answer: D

10. For agents that run on new and modified documents, newly received mail documents, or newly modified documents, what method can you use to make each document as "processed" to ensure that a document gets processed by the agent only once (unless it's modified, mailed, or pasted again)?

- A. NotesView.UpdateAll
- B. NotesDocument.SetProcessed
- C. NotesDocumentCollection.Stamp
- D. NotesSession.UpdateProcessedDoc

Answer: D
