

## **Exam4Test e20-845 Exams**

### ***EMC Business Continuity Expert Exam for Implementation Engineers***

**Practice Exam:** e20-845

**Exam Number/Code:** e20-845

**Exam Name:** Business Continuity Expert Exam for Implementation Engineers

**Questions and Answers:** 199 Q&As

#### **Exam Description**

**Order :** [e20-845 Exam](#)

1. Exam4Test offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the e20-845 Exam.

Exam4Test **Practice Exams** for e20-845 are written to the highest standards of technical accuracy, provided by our certified subject matter experts and published authors for development.

3. 100% Guarantee to Pass Your **EMC Certification** exam and get your **EMC Certification Certification**.

We guarantee your success in the first attempt. If you do not pass the **EMC Certification** "e20-845" (Business Continuity Expert Exam for Implementation Engineers on your first attempt, send us the official result. We will give you a FULLY REFUND of your purchasing fee and send you another same value product for free.

4. Exam4Test EMC Certification e20-845 Exam Downloadable.

Our PDF or Testing Engine Preparation Material of EMC Certification e20-845 exam provides everything which you need to pass your exam. The EMC Certification Certification details are researched and produced by our Professional Certification Experts who are constantly using industry experience to produce precise, and logical. You may get "e20-845 exam" questions from different websites or books, but logic is the key. Our Product will help you not only pass in the first Business Continuity Expert Exam for Implementation Engineers( EMC Certification ) exam try, but also save your valuable time.

Comprehensive questions with complete details about e20-845 exam.

e20-845 exam questions accompanied by exhibits. Verified Answers Researched by Industry Experts and almost 100% correct.

Drag and Drop questions as experienced in the Real EMC Certification exam. e20-845 exam questions updated on regular basis.

Like actual EMC Certification Certification exams, e20-845 exam preparation is in multiple-choice questions (MCQs). Tested by many real EMC Certification exams before publishing.

Try free EMC Certification exam demo before you decide to buy it in <http://www.Exam4Test.com>

High quality and Valued for the e20-845 Exam: 100% Guarantee to Pass Your e20-845 exam and get your EMC Certification Certification. Come to <http://www.Exam4Test.com> The easiest and quickest way to get your EMC Certification Certification.

topic. With our completed EMC Certification resources, you will minimize your EMC Certification cost and be ready to pass your e20-845 test on Your First Try, 100% Money Back Guarantee included!

## **e20-845 Exam Study Guide**

e20-845 exam is regarded as one of the most favourite [EMC Certification Certifications](#). Many IT professionals prefer to add e20-845 exam among their credentials. Exam4Test not only caters you all the information regarding the e20-845 exam but also provides you the excellent e20-845 study guide which makes the certification exam easy for you.

## **Exam4Test Engine Features**

Comprehensive questions and answers about e20-845 exam

e20-845 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

e20-845 exam questions updated on regular basis

Same type as the certification exams, e20-845 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free e20-845 exam demo before you decide to buy it in Exam4Test.com

## **Exam4Test Help You Pass Any IT Exam**

[Exam4Test.com](#) offers incredible career enhancing opportunities. We are a team of IT professionals that focus on providing our customers with the most up to date material for any IT certification exam. This material is so effective that we Guarantee you will pass the exam or your money back.

Exam : EMC E20-845

Title : Business Continuity Expert Exam for Implementation Engineers

1. Click the Exhibit button.

Based on the symrdf query output, what is needed to make the state of RDF pairs consistent?

- A. Change SRDF to synchronous mode, perform SRDF update, then change SRDF to asynchronous mode
- B. Change SRDF to adaptive copy mode, perform SRDF update, then change SRDF to asynchronous mode
- C. Change SRDF to adaptive copy mode, perform SRDF resume, then change SRDF to asynchronous mode.
- D. Change SRDF to synchronous mode, write disable R2, perform SRDF failover, perform SRDF resume, then change SRDF to asynchronous mode

Answer: C

2. You are implementing SRDF at a customer site, and the customer asks you to configure three additional R1 devices on the source Symmetrix and corresponding R2 devices on the target Symmetrix. You have a host attached to the Symmetrix with SYMCLI already installed, and you have created a device file.

Which operation(s) will create the SRDF device pairs and establish them?

- A. symrdf createpair command with -establish
- B. symrdf createpair command followed by symmir establish command
- C. symmir createpair command followed by symmir establish command
- D. symcfg createpair command followed by symdev establish command

Answer: A

3. A customer is implementing an SRDF/S solution using switched Fibre Channel. The throughput is lower than expected on the SRDF link.

What is the most likely cause of the problem?

- A. Incorrect SRDF listener port settings
- B. Incorrect BB\_Credit setting on the switches
- C. More than 8 RA groups assigned to the RAFs
- D. Not enough cache allocated to the SRDF devices

Answer: B

4. You are validating a remote replica configuration where a RAID-1 protected R1 device needs to be replicated remotely to a RAID-1 protected R2 device. The source R1 device already is a part of a TimeFinder concurrent BCV configuration.

What should you consider to validate the configuration?

- A. The number of I/Os between R1 and BCVs
- B. Whether the R2 device is being remotely replicated to a RBCV
- C. The number of mirror positions available to the RDF target device
- D. The number of mirror positions available to the RDF source device

Answer: D

5. A customer needs to implement a multi-hop SRDF/AR configuration.

How does the bandwidth between Symmetrix arrays impact the potential amount of data lost in case of failure?

- A. Less bandwidth means more cache required
- B. Less bandwidth means longer SRDF/AR cycles
- C. More bandwidth means longer SRDF/AR cycles
- D. More bandwidth means potential data inconsistency in case of failure

Answer: B

6. A customer wants to implement an Exchange 2003 "hot backup" solution on a DMX with TimeFinder Exchange Integration Module (TEIM) software. The Exchange Servers are running on Windows 2003.

When using TEIM which volume layout is required?

- A. Configure the data files and logs on the same volume
- B. Separate storage groups must always reside on separate volumes
- C. Data stores must be stored on the same Symmetrix logical volume
- D. The checkpoint file for a storage group and the databases that make up that storage group must be located on different volumes

Answer: B

7. Click the Exhibit button.

A customer receives an error when trying to back up Exchange using TEIM. The error is, "EMC:ResourcePak\_TEIM SymDbVssControl iExchDbVssControl::IEMCVSSRequestor\_BackupServer failed." The databases on the Exchange Server are laid out as shown.

Which is most likely the cause of the error?

- A. Exchange production volumes are corrupt
- B. There is insufficient time to split all the volumes
- C. Services for Exchange on the backup host are started
- D. Services for Exchange on the production host are down

Answer: B

8. A customer has an application that runs on a SQL Server 2000 database, and the information is stored on a DMX. The customer wants to make daily, local backups of the database using TSIM.

What action does the tsimsnap backup command perform to create this local copy?

- A. Establishes standard and BCV volumes
- B. Keeps track of the database backup history
- C. Requests the operator perform a SQL Server snapshot
- D. Flushes the filesystems used by the database and performs the BCV split

Answer: D

9. You are reconfiguring a DMX with Solutions Enabler SYMCLI. There are several volumes that are already mapped but not in use. The customer wants to convert them to metavolumes.

What do you do to perform this task?

- A. Unmap the devices, set the volumes to not ready, create the metavolumes, and map them
- B. Create a device group, unmap the devices, create the metavolumes, and map the metavolumes
- C. Set the volumes to not ready, unmap the devices, create the metavolumes, and mount the volumes
- D. Create a device group, set volumes to not ready, unmap the devices, create metavolumes, and map the metavolumes

Answer: D

10. A customer is having performance issues with an Oracle database. Workload Analyzer data was collected and reviewed. The EMC IE found a number of busy volumes.

What course of action could the IE use to further identify these busy volumes?

- A. Run Symperf
- B. Ask for an IOSTAT output report
- C. Generate a Symmetrix workload analysis report
- D. Generate reports using the syminq and symdev commands

Answer: D

11. After doing a BCV split and mount on a Window's backup host, the customer determines the data on the BCV copy is inconsistent and missing files. The customer's script is using the SUI utility symntctl.

Which command should be used to help prevent the inconsistent BCV?

- A. umask
- B. flush
- C. umount
- D. deport

Answer: B

12. A customer wants to implement a remote site replication via SRDF.

Which tool is used to calculate the number of tracks to be replicated?

- A. EMC DRU
- B. EMC TimeFinder
- C. EMC Change Tracker
- D. EMC Symmetrix Optimizer

Answer: C

13. You need to configure the volume layout for Oracle on a Linux server that will reside on the Symmetrix DMX. You also need to minimize performance issues resulting from partition misalignment on the physical disks.

Which tool is used to align the disk partition?

- A. fdisk
- B. format
- C. Diskpar
- D. Diskpart

Answer: A

14. A customer is implementing SRDF/A over GigE but is having problems getting through the corporate firewall.

What are the first steps for troubleshooting?

- A. Verify cache on both DMXs exactly match, and COVDs are defined on both DMXs
- B. Verify the SRDF link TCP/IP port matches on each DMX, and that port is open on the firewall(s)
- C. Verify the Fibre adapters are configured as SNOW resources, and COVDs are properly defined in the bin files
- D. Turn off data compression on the GigE adapters, verify TCP/IP addresses on both DMXs, and verify SNOW is defined on the SRDF GigE adapters' bin file.

Answer: B

15. A customer has implemented SRDF over Fibre Channel at a distance of 10 km. The two Symms are direct-connected. The customer is experiencing poor link throughput with this solution.

What will fix the problem?

- A. Install 2GB HBAs
- B. Perform switch tuning
- C. Modify the Symmetrix bin
- D. Install a Fibre Channel switch

Answer: D

16. A customer is using a RAID-1 standard device that already has a paired BCV and one CopyOnAccess Clone copy.

What is the maximum number of additional CopyOnWrite Snap sessions that the customer can create on this device?

- A. 1
- B. 7
- C. 13
- D. 16

Answer: C

17. A customer has had security issues in the past. To resolve them, firewalls were set up between network segments within and external to his data center environment. You are configuring the communication between the Replication Manager server and the administration console(s).

Which port must be allowed to pass through the firewalls to facilitate administration?

- A. 6753
- B. 8080
- C. 65431
- D. 65432

Answer: D

18. Your DMX configuration is approaching 16,000 volumes. In defining the Volume Access Control Database (VCMDB), your 96-cylinder volume is configured as a type-5 VCM database. Once implemented, an old host cannot access the new VCM for device masking commands through SYMCLI. You have verified that the zoning information is correct and can see the VCM using syminq.

What is the next step for troubleshooting?

- A. Verify that the old host is at the latest recommended version of Solutions Enabler using symcli
- B. Initialize the VCMDB using:  
symmaskdb sid nnn init file MyInitBackup vcmdb\_type 5
- C. Initialize the VCMDB to a type-4 using:  
symmaskdb sid nnn init file MyInitBackup vcmdb\_type 4
- D. Backup and restore the VCMDB using:

Answer: A

19. You are planning a new replication of an online transaction processing (OLTP) Oracle database to a remote Symmetrix. The requirements for the task are:

1. The distance between the local and remote sites is 1600 km
  2. The local database must remain online
  3. The customer requires only a restartable copy of the database on the target site
  4. The task should have a minimum performance impact to the local database
- Choose the best set of EMC technologies for the implementation.

- A. R2, RBCV, Instant Split Technology, and SRDF/DM
- B. R1/BCV, R2, Instant Split Technology, and SRDF/S
- C. R2, RBCV, Consistent Split Technology, and SRDF/S
- D. SRDF/A or SRDF/AR single hop

Answer: D

20. A customer wants to split a BCV copy of the production database once a week and then use Clones of the BCV for testing.

Which operations are required to make a Clone usable by a host?

- A. Activate the Clone and split the Clone
- B. Establish the Clone and split the Clone
- C. Split the BCV, create the Clone, and activate the Clone
- D. Establish the BCV, create the Clone, and mount the Clone

Answer: C
